

ABSTRACT

1 A DIY-assembled easy digital camera mainly comprises a flush base plate of
2 package foldable for building box and a digital camera module. A fixing base is
3 glued on the base plate having a battery seat and a circuit board seat for receiving a
4 battery pack and the digital camera module respectively. A fixing hole for setting a
5 viewfinder is perforated in the base plate of package at a proper position where the
6 fixing base is bound with the base plate of package. An opening is formed in the
7 base plate at a location corresponding to a lens and the viewfinder such that the
8 lens and the viewfinder can be exposed to the air through the opening for
9 picture-taking operation.
